iSTOC – About

iSTOC Oy was founded in 2012 in Finland by a group of Nokia professionals with decades of extensive experience in mobile technologies and development of cloud-based health services and applications. The technology itself was developed by Nokia and Nokia had to divest in it given regulatory pressure. Since then and over the years, iSTOC Oy has developed a unique revolutionary mobile technology and solution for Point of Care (POC) Diagnostics market for the majority of infectious diseases by integrating POC testing technology, machine vision, mobile technology, and cloud computing. iSTOC is a global player that specializes in IDA (immediate diagnostics and analytics) and IDR (infectious diseases reader), a turnkey solution for infectious diseases. The IDA IDR solution converts stagnant and disconnected diagnostic data into immediate and actionable information.

iSTOC/Xenon COVID-19 Solution - Unique Points

- Early testing and mass screening is a key element of controlling the spread of COVID-19
- iSTOC/Xenon COVID-19 Mobile Diagnostics Solution is approved by FDA-USA, CE and is HIPAA Compliant
- Test Results, 95+% Accuracy
- Captures all required data points for test results and patients
- 10 Minutes, total test time per patient
- REAL - TIME Test Results and REAL-TIME Data Analytics using advanced cloud-based AI and Machine Learning technology for the Health Service to immediately respond to high risk areas
- Accurate Test Results – Timely Data – Actionable Data
- Does not require clinical lab infrastructure and healthcare professional for use
- Point of Care Deployment, only a SMART PHONE (IOT device) is needed
- Scalability from 0 to 1 million and above patients across geographies in REAL-TIME
- Safer for the health worker as you don't go near the patient's face and you draw a drop of blood from the tip of the finger of an extended arm
- Health workers can be trained to use this system in 15 minutes so it can be deployed to remote areas very quickly
